

Cometa™

FLOOR LAMP

Fact Sheet

daylight

when light matters

Cometa is a floor light unlike any other. This elegant and contemporary lamp emits a focused task light as well as a warm ambient light. The task light utilises our innovative Ray Technology™ which enables light to be directed forward without angling the lamp so you can read or hobby without disturbing anyone else in the room. Choose from 2 colour temperatures when using the task light - daylight (6,000K) and warm light (2,700K) - and add ambience to your room with the soft glow from the illuminating shade. The adjustable shade height, variable brightness, rotating base and a Colour Rendering Index of over 95 make the Cometa a truly beautiful, versatile and highly functional lamp.
